1. A method implemented by a computer, the method comprising:  
analyzing a plurality of database access statements stored in a computer memory that were issued for an application during the application's use to determine previous accessed items and types of access for the application; and  
developing a role for the application based on the previous accessed items and types of access for the application, wherein when the application is in use by a user, the developed role for the application allows the user database access.
10. An article of manufacture comprising:

a machine-readable storage medium storing instructions ~~operable~~ configured to cause one or more machines to perform operations comprising:

analyzing a plurality of database access statements that were issued for an application during the application's use to determine previous accessed items and types of access for the application; and

developing a role for the application based on the previous accessed items and types of access for the application, wherein when the application is in use by a user, the developed role for the application allows the user database access.

14. The article of claim 10 wherein the instructions are further ~~operable~~ configured to cause one or more machines to perform operations comprising determining which of a set of users are authorized to use the application.

15. The article of claim 10 wherein the instructions are further ~~operable~~ configured to cause one or more machines to perform operations comprising:

determining whether a user request to establish an application session has been detected; finding the role for the application; and

assigning the role to a user

17. The article of claim 15 wherein the instructions are further ~~operable~~ configured to cause one or more machines to perform operations comprising:

detecting an end of the application session; and if an end of the application session is detected, disabling the assigned role for the user

18. A database security analyzer comprising:

a communication interface ~~operable~~ configured to receive a plurality of database access statements that were issued for an application during the application's use;

a memory ~~operable~~ configured to store the issued database access statements;  
and

a processor ~~operable~~ configured to develop a role for the application based on the previously issued database access statements for the application, wherein when the application is in use by a user, the developed role for the application allows a user database access.

23. A method implemented by a computer comprising:

capturing a plurality of database access statements that were issued for one or more applications during the application's use, wherein the database access statements comprise Structured Query Language (SQL) queries;

normalizing the captured database access statements;

eliminating redundancies in the normalized database access statements;

analyzing the normalized database access statements stored in a computer memory to determine previous accessed items and types of access for an application,

wherein the previous accessed items and types of access include objects accessed and operations performed on the objects;

determining permissions for the application based on the previous accessed items and types of access for the application;

developing a role for the application based on the determined permissions;

determining which of a set of users are authorized to use the application;

detecting a user request to establish a session of the application;

determining if the user is authorized to use the application;

if the user is authorized to use the application, finding the role for the application;

assigning the role to the user;

detecting an end of the application session; and

if an end of the application session is detected, disabling the assigned role for the user.

### ***REASONS FOR ALLOWANCE***

for the application based on the previous accessed items and types of access for the application, wherein when the application is in use by a user, the developed role for the application allows the user database access" as recited in claims 1, and 10; "a processor configured to develop a role for the application based on the previously issued database access statements for the application, wherein when the application is in use by a user, the develop role for the application allows a user database access" as recited in claim 18; and "determine previous accessed items and types of access for an application, wherein the previous accessed items and types of access include objects accessed and operations performed on the objects; determining permissions for the application based on the previous accessed items and types of access for the application; developing a role for the application based on the determined permissions; determining which of a set of users are authorized to use the application" as recited in claim 23 in conjunction with all other limitations of the dependent and independent claims are not taught or suggested, or obvious over the prior art of record. Therefore, claims 1 – 23 are hereby allowed.
